

Invest in In-House Data Intelligence Take Control of Your Data and Costs

Corporations routinely overspend when managing legal matters on a case-by-case basis. While individual projects and cases can be well run and fiscally sound, **there is an expensive, hidden inefficiency costing the business millions of dollars.** Namely, the repeat collection, processing and review of the same data and documents. This “starting over” approach benefits consulting teams, service providers and law firms but taxes the corporation with having to pay for the same knowledge again and again.

50% of all corporate legal spend is on external sources.

*According to the 2021 CLOC State of the Industry survey report

Data Reuse Delivers Data Intelligence, Better eDiscovery and Better ROI

One Discovery delivers In-House Data Intelligence across your entire eDiscovery workflow. This data intelligence translates into:

Better Insights:

Reuse Attorney Work Product – Focus on Case Strategy: Reuse coding decisions from previous, similar matters and invest time savings in building better case strategies.

Identify High Risk Custodians and Topics More Quickly: Data reuse provides the legal team advance notice about key custodians, sensitive evidence and confidential information across the matter.

Improve Accuracy and Consistency: Leverage the intelligence and metrics from previously processed and analyzed data to better manage and guide projects.

Better Discovery:

Increase Response Times: Materially improve response times by maintaining load-ready data catalog and limiting productions by excluding privileged documents. What once took weeks and months is completed in hours or days.

Benefit from Proven Infrastructure & Scalability: One Discovery scales with you – lowers costs significantly and improves response times by cataloging – and making accessible – high frequency custodial data.

Upgrade Security: Corporations retain more control over documents, process, and security using ONE Discovery on-premise and in-place solutions.

Better Governance:

Lower Collection & Processing Costs: Collect and process all high frequency data one time, and eliminate costs associated with reactively collecting and processing the same data for each matter.

Realize Cross-Matter ROI: Save your organization tens of millions of dollars annually; support archiving and compliance teams on all internal initiatives for regulated data.
